

Intel Unite + Door Tablet

Integration that works

What is it?

Intel Unite is an in-room collaboration system while Door Tablet is a scheduling display system - and now they work together, in harmony:

Meeting participants will now ...

- Be very aware how time flies by
- Ensure they end meetings on time
- Prepare follow-up actions in good time
- Make room for other users who need space
- Work more effectively

Intel Unite: a successful integration

As part of its strategy to link effectively with the world's leading software systems and hardware platforms, Door Tablet has successfully integrated its solution with Intel Unite.

The global collaboration software, most recently upgraded to its new Version 4, was devised as a platform for managing meetings and presentations in the workspaces of the future. Anyone now securing the Intel Unite and its "Next Unit of Computing" (NUC) hardware will be able to link to Door Tablet's digital signage solution, enabling the ultimate in smoothly managed and effective meetings.

Changes to meeting arrangements can be accommodated quickly and easily on the fly, whether from the tablet or remotely from elsewhere in the building, or indeed anywhere else in the world.

"Of all the available options, the Intel Unite solution provided the simplest user experience. Associates walk in, launch the app, type in a PIN, and they're connected to the display."

-- Ben Crosier
Technology Architect, Cerner

Leveraging the power of Door Tablet

Door Tablet connects to a wide range of scheduling platforms including Microsoft Exchange, Office 365, IBM Domino and IWMS systems such as Axxerion. Thus, the addition of Door Tablet expands the horizons of Intel Unite immediately, bringing thousands more potential users into its collaborative environment.

How does the integration work?

The Door Tablet system mainly operates outside of meeting spaces while the Intel Unite system operates inside the meeting rooms. The integration is enabled via the Door Tablet App on the end-point, communicating with the Intel Unite Hub inside the room. In turn, the Intel Unite Hub is enabled with either the plugin for version 3.3 or its new Module for version 4.

With an engaging system such as Intel Unite, participants are often immersed in their collaborative work and forget how quickly time flies by. Participants reach the end of meetings without having covered the agenda or agreed follow-on actions.

To avoid this problem, Door Tablet communicates with participants as the meeting progresses by displaying schedule status updates during the meeting. For example, participants will be informed that the meeting has reached the half-way mark, or is about to end.

The following meeting milestones are used:

- Show meeting start details
- Alert if meeting not checked in
- Show progress halfway and 3/4 way
- Show the approaching end of meetings
- Turn Unite monitors OFF when not needed

How does Intel Unite make life easier?

Intel Unite is a content-sharing software application that provides a fast, simple, and cost-efficient way to deliver a more secure and more manageable collaboration experience. It requires no additional licensing fees, and no training.

Key features include:

- Reduced costs in managing meetings
- Remote management capabilities, everything from basic upkeep and patching to remote repairs
- Improved security and confidentiality
- More secure data: meetings are protected with the enterprise-grade security of 256-bit Secure Sockets Layer (SSL) data encryption. What happens in smarter meetings stays in smarter meetings
- From Proof of Concept to State of the Art: start small and scale smart, right up to server-controlled smart meeting rooms
- In-room controls: Manage lighting, speakerphones, cameras, and other environmental settings
- Multiple Operating System support
- Integrates with other conferencing solutions, e.g. Skype for Business and Zoom.

In summary, Intel Unite works seamlessly with existing technologies, while integrating a wide range of devices, operating systems, and business plugins. Participants simply log in with a secure, 6-digit pin number and away they go. Meetings that had once seemed a niggling nightmare become inspiring, and far more productive. In short, business becomes fun.
