

DOOR TABLET

Meeting Room Management in Real Time

DOOR TABLET software allows you to manage meeting rooms in real time, throughout the organisation and by meeting rooms, using tablets fixed by doors. It connects to your scheduling system and significantly improves meeting room utilisation:

- Need a room now? Go to the nearest tablet and find an empty room
- Arrived at an empty room? Reserve it for yourself with a click
- Found a busy meeting room? Not to worry, you can find a free room in the area
- Meeting needs to be extended? Go to the tablet and extend it
- Finished a meeting ahead of time? Release the room to benefit others
- Refreshment needed or equipment missing? Go to the tablet and ask for it
- Room dirty, air-conditioning broken? Go to the tablet and report it
- Reserved a room yesterday? Check-in to confirm your arrival and keep the room
- Cannot find your meeting place? A television at the entrance shows what meetings have been scheduled and where in the building

MANY DISPLAY TYPES

DOOR TABLET offers a cost effective solution using tablets installed by meeting rooms and central areas with a variety of displays. This allows you to focus on meeting with clients and colleagues alike, and not worry about finding a room.

FLEXIBLE DESIGN

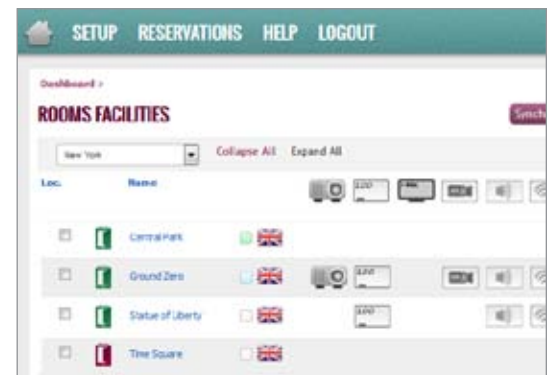

The software allows you to brand the display according to the organisational needs. You may change backgrounds, fonts, colours, sizes - in short, everything. This ability will leave a lasting impression on all.

SYSTEM MANAGEMENT USING A BROWSER

DOOR TABLET allows you to manage all aspects of the system using a browser, centrally and efficiently. Whether you have just a few rooms or hundreds, the interface facilitates fast and complete control.

CHOICE OF SYSTEMS AND CONNECTIVITY

DOOR TABLET runs on Apple iOS®, Google Android® and HTML5 browsers. You can also use DOOR TABLET to display schedules and welcome messages on televisions, placed in central areas. DOOR TABLET works directly with Microsoft Exchange®, Google Calendar® and IBM Domino® - in real time.

SEE OTHER ROOMS STATUS IMMEDIATELY

No more wasted time in searching for an empty room - review the status of rooms in the local area from any tablet. Reserve your space right away or by the actual room.

HOT-DESKING DISPLAYS

DOOR TABLET allows access to resources such as “hot desks” using a Cluster display by managing a number of resources on a single tablet or one touch display.

Forgot to book a desk? No problem - check the display and look for an empty one, book it and head there in the knowledge that you can do your work uninterrupted.

INTEGRATE WITH BESPOKE SYSTEMS

Many organisations have developed bespoke reservation systems in various sectors, from hospitals to accounting and educational institutions. The software allows such organisations to connect to the DOOR TABLET server, check rooms status, create new appointments, extend existing meetings and more. These appointments will show immediately on the appropriate display.

TABLETS AND COMPUTERS - YOUR CHOICE

Our clients like the freedom that DOOR TABLET provides when it comes to selecting the display and server hardware. From tablets and enclosures, to touch screens and televisions, the choice is yours. This freedom allows local purchasing at the best price, with warranties from local suppliers.
